

The CBF Church of England Short Duration Bond Fund

Fund fact sheet – 30 September 2024

Investment objective and policy

The fund aims to generate a total return (income plus capital growth) of cash (represented by the Sterling Overnight Index Average) plus 1.75% per year (after fees and expenses are deducted), when measured over a rolling three-year period. The fund will invest in a range of fixed-interest and variable-rate debt securities (also known as bonds) and other debt-related instruments issued in a range of currencies by companies (known as corporate bonds) and governments, including loans, inflation-linked securities, money-market instruments, and asset-backed or other securitised products (financial instruments backed by assets that generate an income, for example, mortgages or student loans). The fund will be managed to ensure its duration is less than 3.5 years, with the aim of reducing the effect of changes in interest rates on the fund's value. The fund's duration measures the sensitivity of the value of the fund to a change in interest rates (the lower the duration the less impact a change in interest rates will have on the fund's value). The fund may invest in instruments that are either investment grade or non-investment grade (up to a maximum of 20% of the fund) as rated by a recognised credit rating agency that the manager or sub-investment manager has determined meets appropriate regulatory standards. For more details of the restrictions that apply to the fund, please see the scheme information. The fund uses derivatives (financial instruments whose value is linked to that of another asset) for investment purposes and efficient portfolio management (for example, hedging to reduce currency risk). The fund is managed in line with the manager's ethical investment exclusions policy, which you can read in the policies and reports section on our website.

Target investors

The fund is designed for Church of England charities who want to invest for at least 3 years and who are looking for a return that is better than holding cash.

Who can invest?

Fund update

Bond prices rose mainly because central banks reduced interest rates during the quarter, which more than offset concerns at individual companies. The fund's hedges, to protect against weakening credit fundamentals, also increased returns. The fund's holdings of corporate bonds remain focused on high-quality businesses, whose progress depends less on broader economic growth. By sector, bonds of banks and other financial institutions increased returns during the quarter. Bonds of healthcare firms and the fund's limited position in high-yield bonds also helped returns. By contrast, bonds of automakers and producers of auto parts detracted from returns, as demand in this sector weakened and the industry's costs rose.
